Sequence 35, Application US/10380124

Publication No. US20040053874A1

Publication No. US20040053874A1

GENERAL INFORMATION:

APPLICANT: Brett P. Monia

TILE OF INVENTION: ANTISENSE MODULATION OF CLUSTERIN EXPRESSION
FILE REFRENCE: RTS-0156

CURRENT APPLICANTON NUMBER: US/10/380,124

CURRENT FILING DATE: 2003-03-10

SEQ ID NO 35

Sequence 27, Application US/10646391A

Sequence 27, Application No. US20040082534A1

GENERAL INFORMATION:
APPLICANT: Jansen, Martin

APPLICANT: Jansen, Burkhard

TITLE OF INVENTION: Treatment of Melanoma by Reduction in Clusterin Levels
FILLE REPRENCE: UBC. P-0.35

CURRENT APPLICATION NUMBER: US/10/646,391A

CURRENT FILING DATE: 2003-08-21
                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .
